

The SASH BLOCKER is an ancillary security device that can be fitted to most types of PVCu windows and doors. As the product is face fixed, it makes an ideal security upgrade to windows and doors that were installed some year's ago and at the time seemed acceptable but today are lacking the benefit of security against forced entry.

This product can be fitted in various ways, however we would recommend fixing direct into reinforcement, either steel or aluminium, or if direct into PVCu by the use of a JACKNUT, a cavity fixing product used with a M5 machine screw (available separately if required).

As you will note from the specification sheet we cater for both safety and security with the emphasis on safety in option 1, With the added benefit of full security if required by means of a deadlock facility in option 2.

A similar product is available for TIMBER with a 5mm higher base unit.

Technical Data.

SASH BLOCKER

OPTION 1

Self latching, push button to release operation.

OPTION 2

Self latching, push button to release operation.
With allen key deadlock facility for added security
(2.40 A/F Allen key)

FIXING.

Face fix. with option on M5 screw and M5 JACK-NUT
Supplied with two colour coded screw covers and a standard spacer button pack.

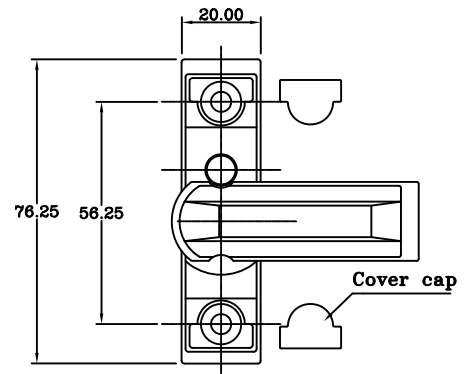

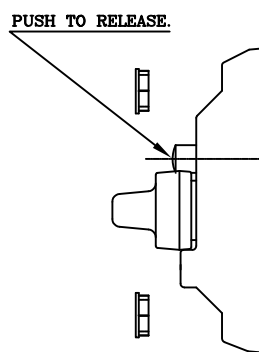

FINISH.

Powder coated
BROWN OR WHITE.

CONSTRUCTION

Base and thumbturn in Zinc Alloy to BS 1004, with copolymer spacer buttons

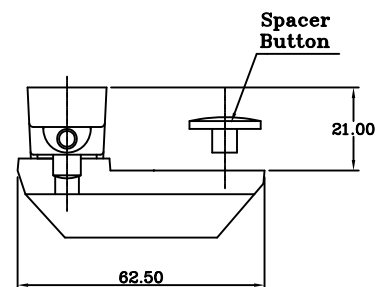

Product boxed in 10's

Standard Spacer Button Pack

- (1) 1.50mm
- (1) 3.00mm
- (1) 5.00mm

Special Spacer Button Available
(1) 9.00mm

Key to deadlock allen screw facility, and other buttons sizes are available at over and above cost to the standard unit price.
